

Address security risks. Stay supported. And do it your way.

Windows Server 2022 Modernize to boost your business.

Did you know that mainstream support for Windows Server 2012 ends in 2023 – and that support for Windows Server 2008 has already ended? Thankfully, there's no need to risk your business any longer. With Lenovo you can upgrade your way and at your own pace, with the #1 most-reliable x86 servers.¹

Lenovo

What are the risks of not upgrading?

Servers running an out-of-support Windows Server version have little or no protection from emerging threats and may not meet regulatory requirements.

Data and applications are at risk.

No more security updates means new vulnerabilities will not be fixed.

Compliance could be at risk.

Typically, data regulations require businesses to take appropriate steps to prevent data breaches. This includes taking a modern approach to security.

Why Windows Server 2022 and Lenovo?

The partnership between Lenovo and Microsoft helps you reduce risk, choose a single, simplified Windows Server 2022 solution, and achieve faster time to value.

Advance security goals:

Features include AES-256 encryption and protection against firmware attacks.

Simplify migration:

Our certified, co-engineered solutions provide everything you need.

Build your hybrid cloud:

Easily extend Azure services, as and when you need them. Use the first cloud-native SIEM.

Accelerate modernization:

Deploy and scale containerized applications with a flexible platform.

Make IT greener:

Easily offset your carbon emissions with Lenovo Carbon Offset Services.

Be assured of long-term support:

Windows Server 2022 will receive support until 2031.

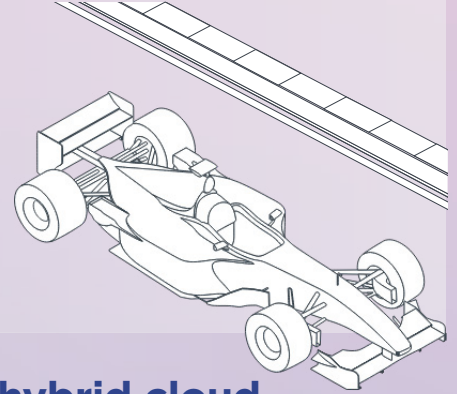

A smarter way to upgrade – your way

Some businesses need new servers to meet bigger performance needs. Some want extended support for Windows Server. And 80% have a hybrid cloud strategy to implement.² Whatever your strategy and budget, Lenovo has an upgrade path for Windows Server that fits.

Upgrade on powerful, ultra-reliable servers

Windows Server 2022 + Lenovo ThinkSystem

- Run the latest Windows Server version on servers designed for business-critical workloads
- Enjoy a smooth, stress-free migration with an end-to-end solution with professional Lenovo services

Build a foundation for hybrid cloud

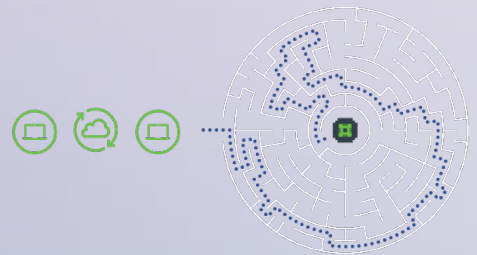

Lenovo ThinkAgile MX with Azure Stack HCI

- Implement your hybrid cloud strategy with a proven, turnkey solution developed by Lenovo and Microsoft
- Easily modernize Windows Server and Microsoft SQL Server workloads on-premises or in the cloud

Get free extended security updates

Azure services + your existing environment

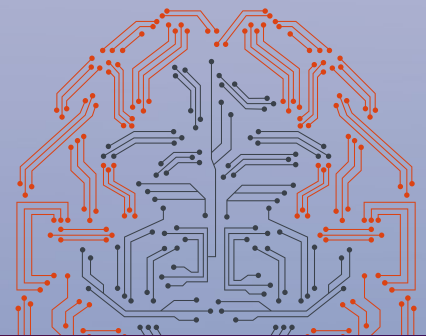

- Prepare for a future upgrade by migrating your Windows Server and SQL Server workloads to Azure or Azure Stack HCI
- Receive up to 3 years extended security updates for older Windows Server and SQL Server editions at no additional cost
